**PRESS RELEASE**

**Airforms, Inc. awarded new FAA PMA approvals**

**Baffle kits now available for Cessna C177RGII**

# # #

**BIG LAKE, ALASKA, 20-Nov-15** – Hot on the heels of their announcement of FAA PMA approval for the engine baffles for Cessna C177B models (1973-1974), Airforms’ is pleased to announce they have received FAA PMA approval for the baffles for the C177RGII’s. The baffles from the new C177RGII kit are eligible for installation on serial numbers 177RG0419, and 177RG0593 through 177RG1366. The newly approved baffles expand Airforms’ engine baffle product line to over 60 applicable aircraft models.

“We have continued to expand our coverage on Cessna Aircraft applications, and the baffle set for the Cardinal RGII was the next logical step,” said Steve Hunter, Sales and Marketing Executive. “We work directly with our customers to hone an understanding of where we can best support the aging fleet. All of the parts in our most recent Cardinal baffle releases are designed for longer life and increased serviceability, and we are pleased to offer customers a price point near 50% off OEM list.”

Airforms baffles are available with either a bare metal or durable powder coat finish. The baffles incorporate design reinforcements with longer lasting materials, and feature reinforced Hi-Temp silicone seals fastened to the metal baffles with rivets. All baffles are FAA approved replacements for the original Cessna parts, and are individually interchangeable.

Airforms is the world’s leading supplier of replacement engine baffles for a wide range of general aviation aircraft; products also include an expanding line of turboprop aircraft PMA parts and STCs. Airforms maintains an FAA approved manufacturing system for PMA parts, supported by an engineering department with FAA DER staff.
